

**CTO** SUGGESTED L-CODE L0190

**CROSS** PDAC APPROVED L-CODE L0472

The CTO provides external immobilization in the planes of flexion, extension, rotation and lateral bending to facilitate patient recovery. The occipital/cranial region is fully contained for maximum support. Combine optimum control and comfort with the CTO's anatomical design.

The CROSS Brace is a comfortable, cosmetic hyperextension brace that can be concealed under patient's clothing. The ease of donning and doffing improves patient compliance.

- Pre-shaped aluminum anterior/ posterior uprights
- Slotted bars adjust to desired mandible/ occipital & cranial heights
- Large trachea opening
- Hook & loop closures with mandible occipital & cranial strapping options
- Forehead strap
- Washable & breathable pads absorb perspiration & reduce heat buildup

- CROSS pectoral provides rotation and linear adjustment
- Hinged pubic pad assembly adjusts to patient's contour and can be quickly bent for precise fit
- Universal closure strap and pad – one long strap which can be cut to patient's circumference
- Anterior closure allows for easy donning and doffing
- Adjustable, flexible pectoral pads with silicone hinges fit comfortably below clavicles and will not impinge on patient's sternum or choke when sitting, providing increased comfort and compliance
- Length from sternal notch to sym pubis Standard 15", Long 20"
- Sizing fits up to 54" waist

**Typical Indications** • C1-T1 Spinal Immobilization  
• Cervical Management • Limit Flexion, Extension, Rotation

**Typical Indications** • Osteoporosis • Kyphosis  
• Thoracic Stabilization • Thoracic Extension  
• Spinal Alignment
